Scientific Method - Introductory Activity

Directions: For this activity you must organize the 18 laminated sheets into six groups of three. Each group should contain the name of a specific step of the scientific method (outline with a dotted line), a detailed description of the step (outlined with a solid line), and a picture that visually represents the step. Once you have the sheets correctly organized into groups, you should decide on the order in which these steps occur. Finally, you should complete the table below, in the correct order, with the name of the step, its detailed description, and a sketch of the visual.

Step	Name of Step	Description	Sketch
1			
2			

3			
4			
5
