Structure of the Atom - Research

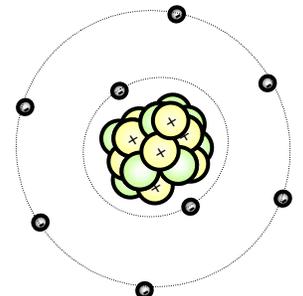

You are a historian that specializes in scientific discoveries. Currently, you are trying to determine how scientists have come to their present understanding of atoms and the structure of atoms. This task will require you to perform extensive research for information that goes back centuries, and you only have two days to do it. Luckily, during these times, access to information has been made very easy due to the internet. What you do know at this point are the names of eight people. They are:

- James Chadwick
- John Dalton
- Ernest Rutherford
- Democritus
- Erwin Schrodinger
- J.J. Thomson
- Antoine Lavoisier
- Niels Bohr

All you know about these individuals is that they may have provided some information about the atom.

Upon completing your research, you need to share what you have learned with your peers. In order to do this effectively, you must create an accurate timeline that illustrates the proper sequence of events/discoveries. This will provide a nice summary of the information you gathered.

Good Luck!
