# Find someone who...

can identify and describe the two components of a solution, and can provide you with an example.

1.

2.

can explain the pH scale.

---

---

---

---

---

---

---

---

---

---

can identify and describe the two types of mixtures.

1.

2.

can compare and contrast acids and bases.

---

---

---

---

---

---

---

---

---

---

can explain what a solution's concentration is and can detail the three different descriptions (dilute, saturated, supersaturated) of a solution's concentration.

---

---

---

---

---

---

---

---

---

---

can describe a neutralization reaction.

---

---

---

---

---

---

---

---

Students must initial the answer they give you after you write it down.
