Engineering Design Process - Introductory Activity

Directions: For this activity you must organize the 18 laminated sheets into six groups of three. Each group should contain the name of a specific step of the engineering design process (outline with a dotted line), a detailed description of the step (outlined with a solid line), and a picture that visually represents the step. Once you have the sheets correctly organized into groups, you should decide on a reasonable order in which these steps occur. Finally, you should complete the table below, in order, with the name of the step, its detailed description, and a sketch of the visual.

Step	Name of Step	Description	Sketch
